Itajuba, MG, Brazil

FULL STACK DEVELOPER | PYTHON | REACT | ANGULAR | NODE.JS | APPLIED AI | AUTOMATION

GitHub LinkedIn Portfolio mateus.bonette00@gmail.com

PROFESSIONAL SUMMARY

Analytical, proactive and results-oriented professional with strong adaptability, fast learning, and problem-solving skills for complex challenges. Able to communicate ideas clearly, collaborate across different areas and take ownership of responsibilities. Seeking to contribute to challenging projects by combining initiative, organization, critical thinking and continuous improvement to generate real value for teams, users and businesses.

PROFESSIONAL EXPERIENCE

Moontech - Software Factory
Full Stack Developer

Remote, Brazil
May 2024 - Present

- Development of scalable full stack solutions using Angular, Next.js, GraphQL, Python, PostgreSQL, Docker and AWS.
- Creation of intelligent automations with language models (AI/LLMs) integrated with HubSpot for lead qualification and commercial support.
- Development of interactive analytical dashboards with Python and Streamlit, integrating operational data to support decision-making.
- Work in product engineering, aligning business requirements, UX/UI design and system integrations in production environments.

byron.solutions - Software Factory (Junior Enterprise)
Full Stack Developer

Remote, Brazil
Apr 2020 - Nov 2021

- Development of websites, landing pages, web systems and automations for clients in a software house, connecting requirements, product and technical delivery.
- Implementation of backend features, REST integrations and CRUD logic, with Git/GitHub version control in internal and commercial projects.
- Acted as Product Owner/project manager, organizing scope, backlog, Trello demands and Figma prototypes.
- Interface between clients and the technical team, supporting consultative sales, expectation alignment and translation of business needs into digital solutions.

Pro-Saude Materiais Odontomedicos
Full Stack Developer | Process Automation

Itajuba, MG - Brazil
Apr 2020 - Feb 2022

- Development of automations and internal systems to digitize administrative, financial, commercial and operational routines.
- Creation of inventory, financial and operational organization controls using Python, JavaScript, Google Sheets, integrations and CRUD logic.
- Automation of manual tasks, social media workflows with generative AI/APIs and a WhatsApp bot integrated with OpenClaw.
- Support for improvements in productivity, operational control, digital presence and process organization in a real business environment.

EDUCATION

Federal University of Itajuba - UNIFEI
Bachelor's Degree in Computer Science

Itajuba, MG, Brazil
Completed in 2025

- Strong foundation in software engineering, algorithms, data structures, databases, artificial intelligence, networks and systems development. During the degree, developed academic and practical projects, worked as a volunteer teacher at CAAI, an educational social project/NGO associated with UNIFEI, and participated in a junior enterprise, applying technology to solve real problems, organize processes, communicate solutions and connect technical, product and business perspectives.

TECHNOLOGIES

Core stack: React, Next.js, Angular, TypeScript, Node.js, Python, PostgreSQL

Backend and APIs: Express, Django, REST, Prisma, Node.js

Data and AI: Pandas, Streamlit, LLMs, Agents, Applied AI, Web scraping

DevOps and tools: Docker, AWS, Git, GitHub, GitLab, Figma

Languages: Portuguese (Native), English (Intermediate)

PROJECTS

Qota Finance
FULL STACK PLATFORM FOR AMAZON OPERATIONS

- Full stack platform for operational and financial management of an Amazon store, bringing together orders, inventory, cash flow, product margins, alerts and internal routines in a single dashboard.
- Result:** Reduced dependence on spreadsheets and manual checks, improving visibility into margins, inventory risks, operating cash and previously scattered processes.

FBA Automation Hub
PROCESS AUTOMATION AND WEB SCRAPING

- Full stack automation tool for supplier research, product validation and spreadsheet processing, connecting a web interface, scraping, catalog reading and result export.
- Result:** Made product sourcing and analysis routines faster, traceable and less manual, freeing operational time and reducing errors in repetitive tasks.

CoinSight
AI, MACHINE LEARNING AND DATA ANALYSIS - FINAL PROJECT

- Analytical platform for cryptocurrency research that combines historical prices, financial indicators, predictive models, social sentiment and geopolitical events in interactive dashboards.
- Result:** Enabled a more complete, data-driven analysis of the crypto market, replacing manual collection with automated pipelines and visualizations to support decisions.
