Brazil - remote, hybrid or on-site

PROFESSIONAL SUMMARY

Full stack developer and AI engineer with experience in React, Angular, Node.js, Python, PostgreSQL, automation, data products and client-facing delivery. I combine technical execution, business communication and product thinking to turn manual processes into useful, maintainable and scalable software.

PROFESSIONAL EXPERIENCE

Full Stack Developer - Moontech

May 2024 - Present | Remote | Full-time

- Built frontend and backend features with Angular, Next.js, GraphQL, Python, PostgreSQL, Docker and AWS.
- Created AI automations in HubSpot for lead qualification, proposals, automatic replies and post-sales support.
- Built dashboards with Python, Streamlit and operational data to support commercial and technical decisions.
- Worked close to product, clients and sales, connecting requirements, UX, integration and production.

Full Stack Developer - byron.solutions

Apr 2020 - Nov 2021 | Remote

- Developed websites, landing pages, web systems, backend logic and REST API integrations.
- Worked with Git/GitHub, requirements discovery, Trello backlog organization and Figma prototypes.
- Connected client needs with technical delivery through product, UX and project-management routines.

Full Stack Developer | Process Automation - Pro-Saude

Apr 2020 - Feb 2022 | On-site

- Created automations with Python, JavaScript, Google Sheets, APIs and digital-tool integrations.
- Built internal systems for finance, inventory, operations and management support.
- Automated manual tasks, social media and commercial flows with generative AI.

SELECTED PROJECTS

Noara E-commerce: real client commerce platform with React, Fastify, Prisma, PostgreSQL, admin backoffice, uploads and financial controls.

Qota Finance: operations and finance hub for an Amazon seller, integrating SP-API, PostgreSQL, alerts, workers and
